

Satisfiability Modulo Theories (SMT)

Sylvain Conchon

Cours 9 / 8 avril 2015

- ▶ The **SMT** problem
- ▶ Modern efficient **SAT** solvers
- ▶ **CDCL(T)**
- ▶ Examples of decision procedures: **equality** (CC) and **difference logic** (NCCD)
- ▶ (Combining decision procedures)

What is the SMT problem ?

Satisfiability Modulo Theories
=
SAT solver + Decision Procedures

Checking satisfiability of formulas in a **decidable combination of** first-order theories (e.g. **arithmetic**, **uninterpreted functions**, etc.)

Input: a (quantifier-free) **first-order** formula F

Output: the status of F (**sat** or **unsat**), and optionally a **model** (when sat) or a **proof** (when unsat)

Basic SMT Solving

Given a quantifier-free formula F

$x + y \geq 0 \wedge (x = z \Rightarrow y + z = -1) \wedge z > 3t$ satisfiable ?

1. Convert F to CNF form
2. Replace every literal by a Boolean variable
3. Ask a SAT solver for a Boolean model M
4. Convert back M and call a decision procedure for the union of theories

if M is satisfiable modulo theories, then so is F

otherwise, add $\neg M$ to F and go to step 2

Basic SMT Solving : Example

$$x + y \geq 0 \wedge (x = z \Rightarrow y + z = -1) \wedge z > 3t$$

Basic SMT Solving : Example

$$x + y \geq 0 \wedge (x = z \Rightarrow y + z = -1) \wedge z > 3t$$

1. CNF conversion

Basic SMT Solving : Example

$$x + y \geq 0 \wedge (x \neq z \vee y + z = -1) \wedge z > 3t$$

1. CNF conversion

Basic SMT Solving : Example

$$x + y \geq 0 \wedge (x \neq z \vee y + z = -1) \wedge z > 3t$$

1. CNF conversion
2. Replace arithmetic constraints by Boolean variables

Basic SMT Solving : Example

$$p_1 \wedge (p_2 \vee p_3) \wedge p_4$$

1. CNF conversion
2. Replace arithmetic constraints by Boolean variables

Basic SMT Solving : Example

$$p_1 \wedge (p_2 \vee p_3) \wedge p_4$$

1. CNF conversion
2. Replace arithmetic constraints by Boolean variables
3. Ask the SAT solver for a model

Basic SMT Solving : Example

$$M = \{p_1 = \text{true}, p_2 = \text{false}, p_3 = \text{true}, p_4 = \text{true}\}$$

1. CNF conversion
2. Replace arithmetic constraints by Boolean variables
3. Ask the SAT solver for a model

Basic SMT Solving : Example

$$M = \{p_1 = \text{true}, p_2 = \text{false}, p_3 = \text{true}, p_4 = \text{true}\}$$

1. CNF conversion
2. Replace arithmetic constraints by Boolean variables
3. Ask the SAT solver for a model
4. Convert the model back to arithmetic

Basic SMT Solving : Example

$$M = \{x + y \geq 0, x = z, y + z = -1, z > 3t\}$$

1. CNF conversion
2. Replace arithmetic constraints by Boolean variables
3. Ask the SAT solver for a model
4. Convert the model back to arithmetic

Basic SMT Solving : Example

$$M = \{x + y \geq 0, x = z, y + z = -1, z > 3t\}$$

1. CNF conversion
2. Replace arithmetic constraints by Boolean variables
3. Ask the SAT solver for a model
4. Convert the model back to arithmetic
5. Check its consistency with the appropriate decision procedure for arithmetic

Basic SMT Solving : Example

M is **unsatisfiable** modulo arithmetic!

1. CNF conversion
2. Replace arithmetic constraints by Boolean variables
3. Ask the SAT solver for a model
4. Convert the model back to arithmetic
5. Check its consistency with the appropriate decision procedure for arithmetic

Basic SMT Solving : Example

M is **unsatisfiable** modulo arithmetic!

1. CNF conversion
2. Replace arithmetic constraints by Boolean variables
3. Ask the SAT solver for a model
4. Convert the model back to arithmetic
5. Check its consistency with the appropriate decision procedure for arithmetic
6. Add $\neg M$ to F and go back to step 2

Basic SMT Solving : Example

$$x + y \geq 0 \wedge (x \neq z \vee y + z = -1) \wedge z > 3t \wedge \\ \neg(x + y \geq 0 \wedge x = z \wedge y + z = -1 \wedge z > 3t)$$

1. CNF conversion
2. Replace arithmetic constraints by Boolean variables
3. Ask the SAT solver for a model
4. Convert the model back to arithmetic
5. Check its consistency with the appropriate decision procedure for arithmetic
6. Add $\neg M$ to F and go back to step 2

Main Issues

- ▶ Size of formulas
- ▶ Complex Boolean structure
- ▶ Combination of theories
- ▶ Efficient decision procedures
- ▶ (Quantifiers)

The Satisfiability Modulo Theory Library

<http://www.smtlib.org/>

International initiative:

- ▶ Rigorous description of **background theories**
- ▶ Common **input** and **output** languages for SMT solvers
- ▶ Large **benchmarks**

The SMT Revolution

- 70's: Stanford Pascal Verifier (Nelson-Oppen combination)
- 1984: Shostak algorithm
- 1992: Simplify
- 1995: SVC
- 2001: ICS
- 2002: CVC, haRVey
- 2004: CVC Lite
- 2005: Barcelogic, MathSAT
- 2005: Yices
- 2006: CVC3, Alt-Ergo
- 2007: Z3, MathSAT4
- 2008: Boolector, OpenSMT, Beaver, Yices2
- 2009: STP, VeriT
- 2010: MathSAT5, SONOLAR
- 2011: STP2, SMTInterpol
- 2012: CVC4

SMT : Building Blocks

Three main blocks:

- ▶ SAT Solver
- ▶ Decision Procedures
- ▶ Combining Decision Procedures framework (CDP)

Modern SAT solvers

Is $(p \vee q \vee \neg r) \wedge (r \vee \neg p)$ satisfiable?

- ▶ Truth tables
- ▶ **Resolution**-based procedure (DP [1960])
- ▶ **Backtracking**-based procedure (DPLL [1962])
- ▶ 80's - 90's: focus on variable selection heuristics
- ▶ **Search-pruning** techniques: Non-chronological backtracking, Learning clauses (Grasp [1996]) **CDCL**
- ▶ **Indexing**: two-watched literals (Zchaff, 2001)
- ▶ **Scoring**: deletion of bad learning clauses (Glucose, 2009)

Propositional Logic : Notations

p, q, r, s are propositional variables or **atoms**

l is a **literal** (p or $\neg p$)

$$\neg l = \begin{cases} \neg p & \text{if } l \text{ is } p \\ p & \text{if } l \text{ is } \neg p \end{cases}$$

A disjunction of literals $l_1 \vee \dots \vee l_n$ is a **clause**

The empty clause is written \perp

A conjunction of clauses is a **CNF**

To improve readability, we sometime

- ▶ denote atoms by natural numbers and negation by overlining
- ▶ write CNF as sets of clauses

e.g. $(\neg l_1 \vee L_2 \vee \neg l_3) \wedge (l_4 \vee \neg 2)$ is simply written $\{\bar{1} \vee 2 \vee \bar{3}, 4 \vee \bar{2}\}$

Propositional Logic : Assignments

An **assignment** M is a set of literals such that if $l \in M$ then $\neg l \notin M$

A literal l is **true** in M if $l \in M$, and **false** if $\neg l \in M$

A literal l is **defined** in M if it is either true or false in M

A clause is **true** in M if at least one of its literal is true in M , it is **false** if all its literals are false in M , it is **undefined** otherwise

The empty clause \perp is **not satisfiable**

A clause $C \vee l$ is a **unit** clause in M if C is false in M and l is undefined in M

Propositional Logic : Satisfiability

A CNF F is **satisfied** by M (or M is a **model** of F), written $M \models F$, if all clauses of F are true in M

If F has no model then it is **unsatisfiable**

F' is **entailed by** F , written $F \models F'$, if F' is true in all models of F

F and F' are **equivalent** when $F \models F'$ and $F' \models F$

F and F' are **equisatisfiable** when

F is satisfiable **if and only if** F' is satisfiable

F is **valid** if and only if $\neg F$ is unsatisfiable

- ▶ **Proof-finder** procedure
- ▶ Works by **saturation** until the empty clause is derived

Exhaustive resolution is not practical:
exponential amount of memory

Resolution : State of the Procedure

The state of the procedure is represented by a **variable** (imperative style) **F** containing a set of clauses (CNF)

Resolution : Algorithm

$$\text{RESOLVE} \frac{C \vee l \in F \quad D \vee \neg l \in F \quad C \vee D \notin F}{F := F \cup \{C \vee D\}}$$

$$\text{EMPTY} \frac{l \in F \quad \neg l \in F}{F := F \cup \perp}$$

$$\text{TAUTO} \frac{F = F' \uplus \{C \vee l \vee \neg l\}}{F := F'}$$

$$\text{SUBSUME} \frac{F = F' \uplus \{C \vee D\} \quad C \in F'}{F := F'}$$

$$\text{FAIL} \frac{\perp \in F}{\text{return UNSAT}}$$

$$F = \{\bar{1} \vee \bar{2} \vee 3, \bar{1} \vee 2, 1 \vee 3, \bar{3}\}$$

$$\text{RESOLVE } \frac{\bar{1} \vee \bar{2} \vee 3 \in F \quad 1 \vee 3 \in F}{F := F \cup \{\bar{2} \vee 3\}}$$

$$F = \{\bar{1} \vee \bar{2} \vee 3, \bar{1} \vee 2, 1 \vee 3, \bar{3}\}$$

Resolution : Example

$$\text{RESOLVE } \frac{\bar{1} \vee \bar{2} \vee 3 \in F \quad 1 \vee 3 \in F}{F := F \cup \{\bar{2} \vee 3\}}$$

$$F = \{\bar{1} \vee \bar{2} \vee 3, \bar{1} \vee 2, 1 \vee 3, \bar{3}, \bar{2} \vee 3\}$$

Resolution : Example

$$\text{SUBSUME} \frac{F = F' \uplus \{\bar{1} \vee \bar{2} \vee 3\} \quad \bar{2} \vee 3 \in F'}{F := F'}$$

$$F = \{\bar{1} \vee \bar{2} \vee 3, \bar{1} \vee 2, 1 \vee 3, \bar{3}, \bar{2} \vee 3\}$$

$$\text{SUBSUME} \frac{F = F' \uplus \{\bar{1} \vee \bar{2} \vee 3\} \quad \bar{2} \vee 3 \in F'}{F := F'}$$

$$F = \{\bar{1} \vee 2, 1 \vee 3, \bar{3}, \bar{2} \vee 3\}$$

Resolution : Example

$$\text{RESOLVE } \frac{\bar{1} \vee 2 \in F \quad 1 \vee 3 \in F}{F := F \cup \{2 \vee 3\}}$$

$$F = \{\bar{1} \vee 2, 1 \vee 3, \bar{3}, \bar{2} \vee 3\}$$

Resolution : Example

$$\text{RESOLVE } \frac{\bar{1} \vee 2 \in F \quad 1 \vee 3 \in F}{F := F \cup \{2 \vee 3\}}$$

$$F = \{\bar{1} \vee 2, 1 \vee 3, \bar{3}, \bar{2} \vee 3, \mathbf{2 \vee 3}\}$$

Resolution : Example

$$\text{RESOLVE } \frac{\bar{2} \vee 3 \in F \quad 2 \vee 3 \in F}{F := F \cup \{3\}}$$

$$F = \{\bar{1} \vee 2, 1 \vee 3, \bar{3}, \bar{2} \vee 3, 2 \vee 3\}$$

Resolution : Example

$$\text{RESOLVE } \frac{\bar{2} \vee 3 \in F \quad 2 \vee 3 \in F}{F := F \cup \{3\}}$$

$$F = \{\bar{1} \vee 2, 1 \vee 3, \bar{3}, \bar{2} \vee 3, 2 \vee 3, \mathbf{3}\}$$

Resolution : Example

$$\text{EMPTY} \frac{3 \in F \quad \bar{3} \in F}{F := F \cup \{\perp\}}$$

$$F = \{\bar{1} \vee 2, 1 \vee 3, \bar{3}, \bar{2} \vee 3, 2 \vee 3, \mathbf{3}\}$$

Resolution : Example

$$\text{EMPTY} \frac{3 \in F \quad \bar{3} \in F}{F := F \cup \{\perp\}}$$

$$F = \{\bar{1} \vee 2, 1 \vee 3, \bar{3}, \bar{2} \vee 3, 2 \vee 3, 3, \perp\}$$

Resolution : Example

$$\text{FAIL} \frac{\perp \in F}{\text{return UNSAT}}$$

$$F = \{\bar{1} \vee 2, 1 \vee 3, \bar{3}, \bar{2} \vee 3, 2 \vee 3, 3, \perp\}$$

DPLL is a **model-finder** procedure that builds incrementally a model M for a CNF formula F by

- ▶ **deducing** the truth value of a literal l from M and F by Boolean Constraint Propagations (**BCP**)

If $C \vee l \in F$ and $M \models \neg C$ then l must be true

- ▶ **guessing** the truth value of an unassigned literal

If $M \cup \{l\}$ leads to a model for which F is unsatisfiable then **backtrack** and try $M \cup \{\neg l\}$

DPLL : State of the Procedure

The state of the procedure is represented by

- ▶ a variable **F** containing a set of clauses (CNF)
- ▶ a variable **M** containing a **list** of literals

DPLL : Algorithm

$$\text{SUCCESS} \frac{M \models F}{\text{return SAT}}$$

$$\text{UNIT} \frac{C \vee l \in F \quad M \models \neg C \quad l \text{ is undefined in } M}{M := l :: M}$$

$$\text{DECIDE} \frac{l \text{ is undefined in } M \quad l \text{ (or } \neg l) \in F}{M := l^{\textcircled{a}} :: M}$$

$$\text{BACKTRACK} \frac{C \in F \quad M \models \neg C \quad M = M_1 :: l^{\textcircled{a}} :: M_2 \quad M_1 \text{ contains no decision literals}}{M := \neg l :: M_2}$$

$$\text{FAIL} \frac{C \in F \quad M \models \neg C \quad M \text{ contains no decision literals}}{\text{return UNSAT}}$$

DPLL : Example

$$M = []$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{DECIDE } \frac{1 \text{ is undefined in } M \quad \bar{1} \in F}{M := 1^{\textcircled{a}} :: M}$$

$$M = []$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{DECIDE} \frac{1 \text{ is undefined in } M \quad \bar{1} \in F}{M := 1^{\textcircled{a}} :: M}$$

$$M = [1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{UNIT} \frac{\bar{1} \vee 2 \in F \quad M \models 1 \quad 2 \text{ is undefined in } M}{M := 2 :: M}$$

$$M = [1^{\text{Q}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{UNIT} \frac{\bar{1} \vee 2 \in F \quad M \models 1 \quad 2 \text{ is undefined in } M}{M := 2 :: M}$$

$$M = [2; 1^{\text{Q}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{DECIDE } \frac{3 \text{ is undefined in } M \quad \bar{3} \in F}{M := 3^{\textcircled{a}} :: M}$$

$$M = [2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{DECIDE } \frac{3 \text{ is undefined in } M \quad \bar{3} \in F}{M := 3^{\textcircled{a}} :: M}$$

$$M = [3^{\textcircled{a}}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

DPLL : Example

$$\text{UNIT} \frac{\bar{3} \vee 4 \in F \quad M \models 3 \quad 4 \text{ is undefined in } M}{M := 4 :: M}$$

$$M = [3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{UNIT} \frac{\bar{3} \vee 4 \in F \quad M \models 3 \quad 4 \text{ is undefined in } M}{M := 4 :: M}$$

$$M = [4; 3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{DECIDE } \frac{5 \text{ is undefined in } M \quad \bar{5} \in F}{M := 5^{\textcircled{a}} :: M}$$

$$M = [4; 3^{\textcircled{a}}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{DECIDE } \frac{5 \text{ is undefined in } M \quad \bar{5} \in F}{M := 5^{\textcircled{a}} :: M}$$

$$M = [5^{\textcircled{a}}; 4; 3^{\textcircled{a}}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{UNIT} \frac{\bar{5} \vee \bar{6} \in F \quad M \models 5 \quad \bar{6} \text{ is undefined in } M}{M := \bar{6} :: M}$$

$$M = [5^{\text{a}}; 4; 3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{UNIT} \frac{\bar{5} \vee \bar{6} \in F \quad M \models 5 \quad \bar{6} \text{ is undefined in } M}{M := \bar{6} :: M}$$

$$M = [\bar{6}; 5^{\text{a}}; 4; 3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{BACKTRACK} \frac{6 \vee \bar{5} \vee \bar{2} \in F \quad M \models \bar{6} \wedge 5 \wedge 2 \quad M = [6] :: 5^{\text{a}} :: [4; 3^{\text{a}}; 2; 1^{\text{a}}]}{M := \bar{5} :: [4; 3^{\text{a}}; 2; 1^{\text{a}}]}$$

$$M = [\bar{6}; 5^{\text{a}}; 4; 3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{BACKTRACK} \frac{M \models \bar{6} \wedge 5 \wedge 2 \quad \begin{array}{l} 6 \vee \bar{5} \vee \bar{2} \in F \\ M = [6] :: 5^{\text{a}} :: [4; 3^{\text{a}}; 2; 1^{\text{a}}] \end{array}}{M := \bar{5} :: [4; 3^{\text{a}}; 2; 1^{\text{a}}]}$$

$$M = [\bar{5}; 4; 3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{UNIT} \frac{5 \vee 7 \in F \quad M \models \bar{5} \quad 7 \text{ is undefined in } M}{M := 7 :: M}$$

$$M = [\bar{5}; 4; 3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{UNIT} \frac{5 \vee 7 \in F \quad M \models \bar{5} \quad 7 \text{ is undefined in } M}{M := 7 :: M}$$

$$M = [7; \bar{5}; 4; 3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{BACKTRACK} \frac{5 \vee \bar{7} \vee \bar{2} \in F \quad M \models \bar{5} \wedge 7 \wedge 2 \quad M = [7; \bar{5}; 4] :: 3^{\textcircled{a}} :: [2; 1^{\textcircled{a}}]}{M := \bar{3} :: [2; 1^{\textcircled{a}}]}$$

$$M = [7; \bar{5}; 4; 3^{\textcircled{a}}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

DPLL : Example

$$\text{BACKTRACK} \frac{5 \vee \bar{7} \vee \bar{2} \in F \quad M \models \bar{5} \wedge 7 \wedge 2 \quad M = [7; \bar{5}; 4] :: 3^{\textcircled{a}} :: [2; 1^{\textcircled{a}}]}{M := \bar{3} :: [2; 1^{\textcircled{a}}]}$$

$$M = [\bar{3}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{DECIDE} \frac{5 \text{ is undefined in } M \quad \bar{5} \in F}{M := 5^{\textcircled{a}} :: M}$$

$$M = [\bar{3}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{DECIDE } \frac{5 \text{ is undefined in } M \quad \bar{5} \in F}{M := 5^{\textcircled{a}} :: M}$$

$$M = [5^{\textcircled{a}}; \bar{3}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

DPLL : Example

$$\text{UNIT} \frac{\bar{5} \vee \bar{6} \in F \quad M \models 5 \quad \bar{6} \text{ is undefined in } M}{M := \bar{6} :: M}$$

$$M = [5^{\text{a}}; \bar{3}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{UNIT} \frac{\bar{5} \vee \bar{6} \in F \quad M \models 5 \quad \bar{6} \text{ is undefined in } M}{M := \bar{6} :: M}$$

$$M = [\bar{6}; 5^{\text{a}}; \bar{3}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{BACKTRACK} \frac{6 \vee \bar{5} \vee \bar{2} \in F \quad M \models \bar{6} \wedge 5 \wedge 2 \quad M = [\bar{6}] :: 5^{\text{a}} :: [\bar{3}; 2; 1^{\text{a}}]}{M := \bar{5} :: [\bar{3}; 2; 1^{\text{a}}]}$$

$$M = [\bar{6}; 5^{\text{a}}; \bar{3}; 2; 1^{\text{a}}]$$

DPLL : Example

$$\text{UNIT} \frac{5 \vee 7 \in F \quad M \models \bar{5} \quad 7 \text{ is undefined in } M}{M := 7 :: M}$$

$$M = [\bar{5}^@; \bar{3}^@; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{UNIT} \frac{5 \vee 7 \in F \quad M \models \bar{5} \quad 7 \text{ is undefined in } M}{M := 7 :: M}$$

$$M = [7; \bar{5}^{\text{a}}; \bar{3}^{\text{a}}; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{UNIT} \frac{5 \vee \bar{7} \vee \bar{2} \in F \quad M \models \bar{5} \wedge 7 \quad \bar{2} \text{ is undefined in } M}{M := \bar{2} :: M}$$

$$M = [7; \bar{5}^@; \bar{3}^@; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$\text{UNIT} \frac{5 \vee \bar{7} \vee \bar{2} \in F \quad M \models \bar{5} \wedge 7 \quad \bar{2} \text{ is undefined in } M}{M := \bar{2} :: M}$$

$$M = [\bar{2}; 7; \bar{5}^{\text{a}}; \bar{3}^{\text{a}}; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

DPLL : Example

$$\text{SUCCESS} \frac{M \models F}{\text{return SAT}}$$

$$M = [\bar{2}; 7; \bar{5}^{\text{a}}; \bar{3}^{\text{a}}; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping

- ▶ The clause $6 \vee \bar{5} \vee \bar{2}$ is false in $[\bar{6}; 5^{\text{a}}; 4; 3^{\text{a}}; 2; 1^{\text{a}}]$
- ▶ It is also false in $[\bar{6}; 5^{\text{a}}; \quad ; 2; 1^{\text{a}}]$
- ▶ Instead of backtracking to $M = [\bar{5}; 4; 3^{\text{a}}; 2; 1^{\text{a}}]$, we would prefer to **backjump** directly to $M = [\bar{5}; 2; 1^{\text{a}}]$

Backjump Clauses

Conflict are reflected by **backjump clauses**

For instance, we have the following backjump clauses in the previous example:

$$\begin{aligned} F &\models \bar{1} \vee \bar{5} \\ F &\models \bar{2} \vee \bar{5} \end{aligned}$$

Given a backjump clause $C \vee l$, backjumping can undo several decisions at once: it **goes back** to the assignment M where $M \models \neg C$ and add l to M

We just replace **Backtrack** by

$$\text{BACKJUMP} \frac{\begin{array}{l} C \in F \quad M \models \neg C \quad M = M_1 :: l^\circledast :: M_2 \\ F \models C' \vee l' \quad M_2 \models \neg C' \\ l' \text{ is undefined in } M_2 \quad l' \text{ (or } \neg l') \in F \end{array}}{M := l' :: M_2}$$

where $C' \vee l'$ is a **backjump** clause

Backjumping : Example

$$M = []$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{DECIDE } \frac{1 \text{ is undefined in } M \quad \bar{1} \in F}{M := 1^{\textcircled{a}} :: M}$$

$$M = []$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{DECIDE } \frac{1 \text{ is undefined in } M \quad \bar{1} \in F}{M := 1^{\textcircled{a}} :: M}$$

$$M = [1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{UNIT} \frac{\bar{1} \vee 2 \in F \quad M \models 1 \quad 2 \text{ is undefined in } M}{M := 2 :: M}$$

$$M = [1^{\textcircled{1}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{UNIT} \frac{\bar{1} \vee 2 \in F \quad M \models 1 \quad 2 \text{ is undefined in } M}{M := 2 :: M}$$

$$M = [2; 1^{\text{Q}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{DECIDE } \frac{3 \text{ is undefined in } M \quad \bar{3} \in F}{M := 3^{\textcircled{a}} :: M}$$

$$M = [2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{DECIDE } \frac{3 \text{ is undefined in } M \quad \bar{3} \in F}{M := 3^{\textcircled{a}} :: M}$$

$$M = [3^{\textcircled{a}}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{UNIT} \frac{\bar{3} \vee 4 \in F \quad M \models 3 \quad 4 \text{ is undefined in } M}{M := 4 :: M}$$

$$M = [3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{UNIT} \frac{\bar{3} \vee 4 \in F \quad M \models 3 \quad 4 \text{ is undefined in } M}{M := 4 :: M}$$

$$M = [4; 3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{DECIDE } \frac{5 \text{ is undefined in } M \quad \bar{5} \in F}{M := 5^{\textcircled{a}} :: M}$$

$$M = [4; 3^{\textcircled{a}}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{DECIDE } \frac{5 \text{ is undefined in } M \quad \bar{5} \in F}{M := 5^{\textcircled{a}} :: M}$$

$$M = [5^{\textcircled{a}}; 4; 3^{\textcircled{a}}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{UNIT} \frac{\bar{5} \vee \bar{6} \in F \quad M \models 5 \quad \bar{6} \text{ is undefined in } M}{M := \bar{6} :: M}$$

$$M = [5^{\text{a}}; 4; 3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{UNIT} \frac{\bar{5} \vee \bar{6} \in F \quad M \models 5 \quad \bar{6} \text{ is undefined in } M}{M := \bar{6} :: M}$$

$$M = [\bar{6}; 5^{\text{a}}; 4; 3^{\text{a}}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{BACKJUMP} \frac{\begin{array}{l} 6 \vee \bar{5} \vee \bar{2} \in F \quad M \models \bar{6} \wedge 5 \wedge 2 \\ M = [6; 5^{\textcircled{a}}; 4] :: 3^{\textcircled{a}} :: [2; 1^{\textcircled{a}}] \quad F \models \bar{2} \vee \bar{5} \\ [2; 1^{\textcircled{a}}] \models 2 \quad \bar{5} \text{ is undefined in } [2; 1^{\textcircled{a}}] \end{array}}{M := \bar{5} :: [2; 1^{\textcircled{a}}]}$$

$$M = [\bar{6}; 5^{\textcircled{a}}; 4; 3^{\textcircled{a}}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{BACKJUMP} \frac{\begin{array}{l} 6 \vee \bar{5} \vee \bar{2} \in F \quad M \models \bar{6} \wedge 5 \wedge 2 \\ M = [6; 5^{\textcircled{a}}; 4] :: 3^{\textcircled{a}} :: [2; 1^{\textcircled{a}}] \quad F \models \bar{2} \vee \bar{5} \\ [2; 1^{\textcircled{a}}] \models 2 \quad \bar{5} \text{ is undefined in } [2; 1^{\textcircled{a}}] \end{array}}{M := \bar{5} :: [2; 1^{\textcircled{a}}]}$$

$$M = [\bar{5}; 2; 1^{\textcircled{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{UNIT} \frac{5 \vee 7 \in F \quad M \models \bar{5} \quad 7 \text{ is undefined in } M}{M := 7 :: M}$$

$$M = [\bar{5}; 2; 1^{\text{a}}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

Backjumping : Example

$$\text{DECIDE } \frac{\bar{5} \text{ is undefined in } M \quad \bar{5} \in F}{M := \bar{5}^{\textcircled{a}} :: M}$$

$$M = [\bar{3}^{\textcircled{a}}; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{DECIDE } \frac{\bar{5} \text{ is undefined in } M \quad \bar{5} \in F}{M := \bar{5}^{\textcircled{a}} :: M}$$

$$M = [\bar{5}^{\textcircled{a}}; \bar{3}^{\textcircled{a}}; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{UNIT} \frac{5 \vee 7 \in F \quad M \models \bar{5} \quad 7 \text{ is undefined in } M}{M := 7 :: M}$$

$$M = [\bar{5}^{\text{a}}; \bar{3}^{\text{a}}; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{UNIT} \frac{5 \vee 7 \in F \quad M \models \bar{5} \quad 7 \text{ is undefined in } M}{M := 7 :: M}$$

$$M = [7; \bar{5}^{\text{a}}; \bar{3}^{\text{a}}; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{UNIT} \frac{5 \vee \bar{7} \vee \bar{2} \in F \quad M \models \bar{5} \wedge 7 \quad \bar{2} \text{ is undefined in } M}{M := \bar{2} :: M}$$

$$M = [7; \bar{5}^@; \bar{3}^@; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{UNIT} \frac{5 \vee \bar{7} \vee \bar{2} \in F \quad M \models \bar{5} \wedge 7 \quad \bar{2} \text{ is undefined in } M}{M := \bar{2} :: M}$$

$$M = [\bar{2}; 7; \bar{5}^{\text{a}}; \bar{3}^{\text{a}}; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Backjumping : Example

$$\text{SUCCESS} \frac{M \models F}{\text{return SAT}}$$

$$M = [\bar{2}; 7; \bar{5}^{\textcircled{a}}; \bar{3}^{\textcircled{a}}; \bar{1}]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

Conflict-Driven Clause Learning SAT solvers (**CDCL**) add backjump clauses to M as **learned** clauses (or **lemmas**) to prevent future similar conflicts.

$$\text{LEARN} \frac{F \models C \quad \text{each atom of } C \text{ occurs in } F \text{ or } M}{F := F \cup \{C\}}$$

Lemmas can also be removed from M

$$\text{FORGET} \frac{F = F' \uplus C \quad F' \models C}{F := F'}$$

How to Find Backjump Clauses?

1. Build an **implication graph** that captures the way propagation literals have been derived from decision literals
2. Use the implication graph to explain a conflict (by a specific **cutting** technique) and extract backjump clauses

Implication Graph

An implication graph G is a **DAG** that can be built during the run of DPLL as follows:

1. Create a node for each decision literal
2. For each clause $l_1 \vee \dots \vee l_n \vee l$ such that $\neg l_1, \dots, \neg l_n$ are nodes in G , add a node for l (if not already present in the graph), and add edges $\neg l_i \rightarrow l$, for $1 \leq i \leq n$ (if not already present)

Implication Graph : Example

(Partial) implication graph for the following state of DPLL

$$F = \{\bar{9} \vee \bar{6} \vee 7 \vee \bar{8}, 8 \vee 7 \vee \bar{5}, \bar{6} \vee 8 \vee 4, \bar{4} \vee \bar{1}, \bar{4} \vee 5 \vee 2, 5 \vee 7 \vee \bar{3}, 1 \vee \bar{2} \vee 3\}$$

$$M = [\bar{3}; 2; \bar{1}; 4; \bar{5}; \bar{8}; 9^{\circ}; \dots; \bar{7}; \dots; 6; \dots]$$

Cutting the Implication Graph

To extract backjump clauses, we first cut the implication graph in two parts:

- ▶ the first part must contain (at least) **all** the nodes with **no incoming** arrows
- ▶ the second part must contain (at least) **all** the nodes with **no outgoing** arrows

The literals whose **outgoing edges are cut** form a **backjump clause** provided that **exactly one** of these literals belongs to the current decision level.

Cutting the Implication Graph: Example

$$F = \{\bar{9} \vee \bar{6} \vee 7 \vee \bar{8}, 8 \vee 7 \vee \bar{5}, \bar{6} \vee 8 \vee 4, \bar{4} \vee \bar{1}, \bar{4} \vee 5 \vee 2, 5 \vee 7 \vee \bar{3}, 1 \vee \bar{2} \vee 3\}$$

$$M = [\bar{3}; 2; \bar{1}; 4; \bar{5}; \bar{8}; 9^{\text{a}}; \dots; \bar{7}; \dots; 6; \dots]$$

Cutting the Implication Graph: Example

$$F = \{\bar{9} \vee \bar{6} \vee 7 \vee \bar{8}, 8 \vee 7 \vee \bar{5}, \bar{6} \vee 8 \vee 4, \bar{4} \vee \bar{1}, \bar{4} \vee 5 \vee 2, 5 \vee 7 \vee \bar{3}, 1 \vee \bar{2} \vee 3\}$$

$$M = [\bar{3}; 2; \bar{1}; 4; \bar{5}; \bar{8}; 9^{\textcircled{a}}; \dots; \bar{7}; \dots; 6; \dots]$$

Cutting the Implication Graph: Example

$$F = \{\bar{9} \vee \bar{6} \vee 7 \vee \bar{8}, 8 \vee 7 \vee \bar{5}, \bar{6} \vee 8 \vee 4, \bar{4} \vee \bar{1}, \bar{4} \vee 5 \vee 2, 5 \vee 7 \vee \bar{3}, 1 \vee \bar{2} \vee 3\}$$

$$M = [\bar{3}; 2; \bar{1}; 4; \bar{5}; \bar{8}; 9^{\text{a}}; \dots; \bar{7}; \dots; 6; \dots]$$

Cutting the Implication Graph: Example

$$F = \{\bar{9} \vee \bar{6} \vee 7 \vee \bar{8}, 8 \vee 7 \vee \bar{5}, \bar{6} \vee 8 \vee 4, \bar{4} \vee \bar{1}, \bar{4} \vee 5 \vee 2, 5 \vee 7 \vee \bar{3}, 1 \vee \bar{2} \vee 3\}$$

$$M = [\bar{3}; 2; \bar{1}; 4; \bar{5}; \bar{8}; 9^{\textcircled{a}}; \dots; \bar{7}; \dots; 6; \dots]$$

Cutting the Implication Graph : Other Example

In the first example, **Backjump** is applied for the first time when

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$M = [\bar{6}; 5^{\textcircled{a}}; 4; 3^{\textcircled{a}}; 2; 1^{\textcircled{a}}]$$

Cutting the Implication Graph : Other Example

In the first example, **Backjump** is applied for the first time when

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$M = [\bar{6}; 5^{\textcircled{a}}; 4; 3^{\textcircled{a}}; 2; 1^{\textcircled{a}}]$$

Cutting the Implication Graph : Other Example

In the first example, **Backjump** is applied for the first time when

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$M = [\bar{6}; 5^{\textcircled{a}}; 4; 3^{\textcircled{a}}; 2; 1^{\textcircled{a}}]$$

Cutting the Implication Graph : Other Example

When **Backjump** is applied for the second time, we have

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$M = [7; \bar{5}; 2; 1^{\text{a}}]$$

Cutting the Implication Graph : Other Example

When **Backjump** is applied for the second time, we have

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$M = [7; \bar{5}; 2; 1^{\text{a}}]$$

Cutting the Implication Graph : Other Example

When **Backjump** is applied for the second time, we have

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$M = [7; \bar{5}; 2; 1^{\text{a}}]$$

Backward Conflict Resolution

Backjump clauses can also be obtained by successive application of **resolution steps**

Starting from the **conflict clause**, the (negation of) propagation literals are resolved away in the **reverse order** with the respective clauses that caused their propagations

We stop when the **resolvent** contains **only one** literal in the current decision level

Backward Conflict Resolution: Example

$$F = \{\bar{9} \vee \bar{6} \vee 7 \vee \bar{8}, 8 \vee 7 \vee \bar{5}, \bar{6} \vee 8 \vee 4, \bar{4} \vee \bar{1}, \bar{4} \vee 5 \vee 2, 5 \vee 7 \vee \bar{3}, 1 \vee \bar{2} \vee 3\}$$

$$M = [\bar{3}; 2; \bar{1}; 4; \bar{5}; \bar{8}; 9^{\text{a}}; \dots; \bar{7}; \dots; 6; \dots]$$

$$R = 1 \vee \bar{2} \vee 3$$

Backward Conflict Resolution: Example

$$F = \{\bar{9} \vee \bar{6} \vee 7 \vee \bar{8}, 8 \vee 7 \vee \bar{5}, \bar{6} \vee 8 \vee 4, \bar{4} \vee \bar{1}, \bar{4} \vee 5 \vee 2, 5 \vee 7 \vee \bar{3}, 1 \vee \bar{2} \vee 3\}$$

$$M = [\bar{3}; 2; \bar{1}; 4; \bar{5}; \bar{8}; 9^{\text{a}}; \dots; \bar{7}; \dots; 6; \dots]$$

$$\text{RESOLVE } \frac{R = 1 \vee \bar{2} \vee 3 \quad 5 \vee 7 \vee \bar{3} \in F}{R := 5 \vee 7 \vee 1 \vee \bar{2}}$$

$$R = 1 \vee \bar{2} \vee 3$$

Backward Conflict Resolution: Example

$$F = \{\bar{9} \vee \bar{6} \vee 7 \vee \bar{8}, 8 \vee 7 \vee \bar{5}, \bar{6} \vee 8 \vee 4, \bar{4} \vee \bar{1}, \bar{4} \vee 5 \vee 2, 5 \vee 7 \vee \bar{3}, 1 \vee \bar{2} \vee 3\}$$

$$M = [\bar{3}; 2; \bar{1}; 4; \bar{5}; \bar{8}; 9^{\text{a}}; \dots; \bar{7}; \dots; 6; \dots]$$

$$\text{RESOLVE } \frac{R = 1 \vee \bar{2} \vee 3 \quad 5 \vee 7 \vee \bar{3} \in F}{R := 5 \vee 7 \vee 1 \vee \bar{2}}$$

$$R = 5 \vee 7 \vee 1 \vee \bar{2}$$

Backward Conflict Resolution: Example

$$F = \{\bar{9} \vee \bar{6} \vee 7 \vee \bar{8}, 8 \vee 7 \vee \bar{5}, \bar{6} \vee 8 \vee 4, \bar{4} \vee \bar{1}, \bar{4} \vee 5 \vee 2, 5 \vee 7 \vee \bar{3}, 1 \vee \bar{2} \vee 3\}$$

$$M = [\bar{3}; 2; \bar{1}; 4; \bar{5}; \bar{8}; 9^{\text{a}}; \dots; \bar{7}; \dots; 6; \dots]$$

$$\text{RESOLVE } \frac{R = 5 \vee 7 \vee 1 \vee \bar{2} \quad \bar{4} \vee 5 \vee 2 \in F}{R := \bar{4} \vee 5 \vee 7 \vee 1}$$

$$R = 5 \vee 7 \vee 1 \vee \bar{2}$$

Backward Conflict Resolution: Example

$$F = \{\bar{9} \vee \bar{6} \vee 7 \vee \bar{8}, 8 \vee 7 \vee \bar{5}, \bar{6} \vee 8 \vee 4, \bar{4} \vee \bar{1}, \bar{4} \vee 5 \vee 2, 5 \vee 7 \vee \bar{3}, 1 \vee \bar{2} \vee 3\}$$

$$M = [\bar{3}; 2; \bar{1}; 4; \bar{5}; \bar{8}; 9^{\text{a}}; \dots; \bar{7}; \dots; 6; \dots]$$

$$\text{RESOLVE } \frac{R = 5 \vee 7 \vee 1 \vee \bar{2} \quad \bar{4} \vee 5 \vee 2 \in F}{R := \bar{4} \vee 5 \vee 7 \vee 1}$$

$$R = \bar{4} \vee 5 \vee 7 \vee 1$$

Backward Conflict Resolution: Example

$$F = \{\bar{9} \vee \bar{6} \vee 7 \vee \bar{8}, 8 \vee 7 \vee \bar{5}, \bar{6} \vee 8 \vee 4, \bar{4} \vee \bar{1}, \bar{4} \vee 5 \vee 2, 5 \vee 7 \vee \bar{3}, 1 \vee \bar{2} \vee 3\}$$

$$R = \bar{2} \vee \bar{5}$$

CDCL + Resolution : Example

$$\begin{array}{l} R = \bar{2} \vee \bar{5} \\ M = [6_{\bar{5}\vee\bar{6}}; 5; 4_{\bar{3}\vee 4}] :: 3 :: [2_{\bar{1}\vee 2}; 1] \\ \quad [2_{\bar{1}\vee 2}; 1] \models 2 \\ \quad \bar{5} \text{ undefined in } [2_{\bar{1}\vee 2}; 1] \\ \text{BACKJUMP} \frac{}{M := \bar{5}_{\bar{2}\vee\bar{5}} :: [2_{\bar{1}\vee 2}; 1]; \text{Mode} := \text{search}} \end{array}$$

Mode = resolution

$$M = [6_{\bar{5}\vee\bar{6}}; 5; 4_{\bar{3}\vee 4}; 3; 2_{\bar{1}\vee 2}; 1]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$R = \bar{2} \vee \bar{5}$$

CDCL + Resolution : Example

$$\begin{array}{l} R = \bar{2} \vee \bar{5} \\ M = [6_{\bar{5}\vee\bar{6}}; 5; 4_{\bar{3}\vee 4}] :: 3 :: [2_{\bar{1}\vee 2}; 1] \\ \quad [2_{\bar{1}\vee 2}; 1] \models 2 \\ \quad \bar{5} \text{ undefined in } [2_{\bar{1}\vee 2}; 1] \\ \text{BACKJUMP} \frac{}{M := \bar{5}_{\bar{2}\vee\bar{5}} :: [2_{\bar{1}\vee 2}; 1]; \text{Mode} := \text{search}} \end{array}$$

Mode = *search*

$$M = [\bar{5}_{\bar{2}\vee\bar{5}}; 2_{\bar{1}\vee 2}; 1]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$R =$$

CDCL + Resolution : Example

etc.

$Mode = search$

$$M = [\bar{5}_2 \vee \bar{5}; 2_{\bar{1}} \vee 2; 1]$$

$$F = \{\bar{1} \vee 2, \bar{3} \vee 4, \bar{5} \vee \bar{6}, 6 \vee \bar{5} \vee \bar{2}, 5 \vee 7, 5 \vee \bar{7} \vee \bar{2}\}$$

$$R =$$

Strategies

The inference rules given for DPLL and CDCL are flexible

Basic strategy :

- ▶ apply **DECIDE** only if **UNIT** or **FAIL** cannot be applied

Conflict resolution :

- ▶ Learn only one clause per conflict (the clause used in **BACKJUMP**)
- ▶ Use **BACKJUMP** as soon as possible (FUIP)
- ▶ When applying **RESOLVE**, use the literals in M in the reverse order they have been added

Decision heuristic : VSIDS

The Variable State Independent Decaying Sum (**VSIDS**) heuristic associates a **score** to each literal in order to select the literal with the **highest score** when **DECIDE** is used

- ▶ Each literal has a counter, initialized to 0
- ▶ Increase the counters of
 - ▶ the literal l when **RESOLVE** is used
 - ▶ the literals of the clause in R when **BACKJUMP** is used
- ▶ Counters are divided by a constant, periodically

Scoring Learned Clauses

CDCL performances are tightly related to their learning clause management

- ▶ Keeping too many clauses decrease the BCP efficiency
- ▶ Cleaning out too many clauses break the overall learning benefit

Quality measures for learning clauses are based on scores associated with learned clauses

- ▶ VSIDS (**dynamic**): increase the score of clauses involved in **RESOLVE**
- ▶ LBD (**static**): number of different decision levels in a learned clause

BCP = 80% of SAT-solver runtime

How to implement efficiently $M \models C$ (in **UNIT** and **CONFLICT**) ?

Two watched literals technique:

- ▶ assign two **non-false watched literals** per clause
- ▶ **only if** one of the two watched literal becomes false, the clause is inspected :
 - ▶ if the other watched literal is assigned to true, then do nothing
 - ▶ otherwise, try to find another watched literal
 - ▶ if no such literal exists, then apply **Backjump**
 - ▶ if the only possible literal is the other watched literal of the clause, then apply **UNIT**

Main advantages :

- ▶ clauses are inspected only when watched literal are assigned
- ▶ no updating when backjumping

CDCL(T)

First-Order Logic : Signature and Terms

- ▶ A **signature** Σ is a finite set of **function** and **predicate** symbols with an arity
- ▶ **Constants** are just function symbols of arity 0
- ▶ We assume that Σ contains the binary predicate $=$
- ▶ We assume a set \mathcal{V} of **variables**, distinct from Σ
- ▶ $T(\Sigma, \mathcal{V})$ is the set of **terms**, *i.e.* the smallest set which contains \mathcal{V} and such that $f(t_1, \dots, t_n) \in T(\Sigma, \mathcal{V})$ whenever $t_1, \dots, t_n \in T(\Sigma, \mathcal{V})$ and $f \in \Sigma$
- ▶ $T(\Sigma, \emptyset)$ is the set of **ground terms**
- ▶ Terms are just **trees**. Given a term t and a position π in a tree, we write t_π for the sub-term of t at position π . We also write $t[\pi \mapsto t']$ for the replacement of the sub-term of t at position π by the term t'

First-Order Logic : Formulas

- ▶ An **atomic formula** is $P(t_1, \dots, t_n)$, where t_1, \dots, t_n are terms in $T(\Sigma, \mathcal{V})$ and P is a predicate symbol of Σ
- ▶ **Literals** are atomic formulas or their negation
- ▶ **Formulas** are inductively constructed from atomic formulas with the help of Boolean connectives and quantifiers \forall and \exists
- ▶ **Ground formulas** contain only **ground terms**
- ▶ A variable is **free** if it is not bound by a quantifier
- ▶ A **sentence** is a formula with no free variables

First-Order Logic : Models

A **model** \mathcal{M} for a signature Σ is defined by

- ▶ a domain $\mathcal{D}_{\mathcal{M}}$
- ▶ an interpretation $f^{\mathcal{M}}$ for each function symbol $f \in \Sigma$
- ▶ a subset $P^{\mathcal{M}}$ of $\mathcal{D}_{\mathcal{M}}^n$ for each predicate $P \in \Sigma$ of arity n
- ▶ an assignment $\mathcal{M}(x)$ for each variable $x \in \mathcal{V}$

The **cardinality** of model \mathcal{M} is the the cardinality of $\mathcal{D}_{\mathcal{M}}$

First-Order Logic : Semantics

Interpretation of **terms**:

$$\begin{aligned}\mathcal{M}[x] &= \mathcal{M}(x) \\ \mathcal{M}[f(t_1, \dots, t_n)] &= f^{\mathcal{M}}(\mathcal{M}[t_1], \dots, \mathcal{M}[t_n])\end{aligned}$$

Interpretation of **formulas**:

$$\begin{aligned}\mathcal{M} \models t_1 = t_2 &= \mathcal{M}[t_1] = \mathcal{M}[t_2] \\ \mathcal{M} \models P(t_1, \dots, t_n) &= (\mathcal{M}[t_1], \dots, \mathcal{M}[t_n]) \in P^{\mathcal{M}} \\ \mathcal{M} \models \neg F &= \mathcal{M} \not\models F \\ \mathcal{M} \models F_1 \wedge F_2 &= \mathcal{M} \models F_1 \text{ and } \mathcal{M} \models F_2 \\ \mathcal{M} \models F_1 \vee F_2 &= \mathcal{M} \models F_1 \text{ or } \mathcal{M} \models F_2 \\ \mathcal{M} \models \forall x.F &= \mathcal{M}\{x \mapsto v\} \models F \text{ for all } v \in \mathcal{D}_{\mathcal{M}} \\ \mathcal{M} \models \exists x.F &= \mathcal{M}\{x \mapsto v\} \models F \text{ for some } v \in \mathcal{D}_{\mathcal{M}}\end{aligned}$$

First-Order Logic : Validity

- ▶ A formula F is **satisfiable** if there a model \mathcal{M} such that $\mathcal{M} \models F$, otherwise F is **unsatisfiable**
- ▶ A formula F is **valid** if $\neg F$ is **unsatisfiable**

First-Order Logic : Theories

A **first-order theory** T over a signature Σ is a set of sentences

A theory is **consistent** if it has (at least) a model

A formula F is **satisfiable in T** (or **T -satisfiable**) if there exists a model \mathcal{M} for $T \wedge F$, written $\mathcal{M} \models_T F$

A formula F is **T -validity**, denoted $\models_T F$, if $\neg F$ is **T -unsatisfiable**

Decision Procedures

A **decision procedure** is an algorithm used to determine whether a formula F in a theory T is **satisfiable**

Many decision procedures work on **conjunctions of (ground) literals**

We assume a fix theory T

The state of the procedure is similar to CDCL

- ▶ F contains **quantifier-free** clauses in T
- ▶ M is a list of **literals** in T

CDCL(T) : Rules

CDCL(T) has the same rules than CDCL, augmented with

$$\text{T-CONFLICT} \frac{\textit{Mode} = \textit{search} \quad l_1, \dots, l_n \in M \quad l_1, \dots, l_n \models_T \perp}{R := \neg l_1 \vee \dots \vee \neg l_n; \textit{Mode} = \textit{resolution}}$$

$$\text{T-PROPAGATE} \frac{\textit{Mode} = \textit{search} \quad l(\textit{or}\neg l) \in F \quad l \text{ is undefined in } M \quad l_1, \dots, l_n \in M \quad l_1, \dots, l_n \models_T l}{M := l_{\neg l_1} \vee \dots \vee \neg l_n \vee l :: M}$$

CDCL(T) : Example

$Mode = search$

$M = []$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R =$

$$\text{UNIT} \frac{3 < x \in F \quad 3 < x \text{ is undefined in } M}{M := 3 < x_{3 < x} :: M}$$

$Mode = search$

$M = []$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R =$

$$\text{UNIT} \frac{\exists x \in F \quad \exists x \text{ is undefined in } M}{M := \exists x_{\exists x} :: M}$$

$Mode = search$

$M = [\exists x_{\exists x}]$

$F = \{\exists x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R =$

CDCL(T) : Example

$$\text{T-PROPAGATE} \frac{x < 0 \in F \text{ is undefined in } M \quad \exists < x \in M \quad \exists < x \models_T x \geq 0}{M := x \geq 0_{(\exists \geq x \vee x \geq 0)} :: M}$$

$Mode = search$

$M = [\exists < x_{\exists < x}]$

$F = \{\exists < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R =$

$$\text{T-PROPAGATE} \frac{x < 0 \in F \text{ is undefined in } M \quad \exists < x \in M \quad \exists < x \models_T x \geq 0}{M := x \geq 0_{(\exists \geq x \vee x \geq 0)} :: M}$$

$Mode = search$

$M = [x \geq 0_{(\exists \geq x \vee x \geq 0)}; \exists < x_{\exists < x}]$

$F = \{\exists < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R =$

$$\text{UNIT} \frac{x < 0 \vee x < y \in F \quad M \models_T x \geq 0 \quad x < y \text{ is undefined in } M}{M := x < y_{(x < 0 \vee x < y)} :: M}$$

Mode = *search*

$M = [x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R =$

CDCL(T) : Example

$$\text{UNIT} \frac{x < 0 \vee x < y \in F \quad M \models_T x \geq 0 \quad x < y \text{ is undefined in } M}{M := x < y_{(x < 0 \vee x < y)} :: M}$$

Mode = *search*

$M = [x < y_{(x < 0 \vee x < y)}; x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R =$

CDCL(T) : Example

$$\text{UNIT} \frac{y < 0 \vee x \geq y \in F \quad M \models_T x < y \quad y < 0 \text{ is undefined in } M}{M := y < 0_{(y < 0 \vee x \geq y)} :: M}$$

Mode = *search*

$M = [x < y_{(x < 0 \vee x < y)}; x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R =$

CDCL(T) : Example

$$\text{UNIT} \frac{y < 0 \vee x \geq y \in F \quad M \models_T x < y \quad y < 0 \text{ is undefined in } M}{M := y < 0_{(y < 0 \vee x \geq y)} :: M}$$

Mode = *search*

$M = [y < 0_{(y < 0 \vee x \geq y)}; x < y_{(x < 0 \vee x < y)}; x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R =$

$$\text{T-CONFLICT} \frac{\begin{array}{l} \exists < x, x < y, y < 0 \in M \\ \exists < x, x < y, y < 0 \models_T \perp \end{array}}{R := \exists \geq x \vee x \geq y \vee y \geq 0; \text{Mode} := \text{resolution}}$$

Mode = *search*

$M = [y < 0_{(y < 0 \vee x \geq y)}; x < y_{(x < 0 \vee x < y)}; x \geq 0_{(\exists \geq x \vee x \geq 0)}; \exists < x_{\exists < x}]$

$F = \{\exists < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R =$

$$\text{T-CONFLICT} \frac{\begin{array}{l} 3 < x, x < y, y < 0 \in M \\ 3 < x, x < y, y < 0 \models_T \perp \end{array}}{R := 3 \geq x \vee x \geq y \vee y \geq 0; \text{Mode} := \text{resolution}}$$

Mode = *resolution*

$M = [y < 0_{(y < 0 \vee x \geq y)}; x < y_{(x < 0 \vee x < y)}; x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R = 3 \geq x \vee x \geq y \vee y \geq 0$

CDCL(T) : Example

$$\text{RESOLVE} \frac{R = 3 \geq x \vee x \geq y \vee y \geq 0 \quad y < 0_{(y < 0 \vee x \geq y)} \in M}{R := 3 \geq x \vee x \geq y}$$

Mode = resolution

$M = [y < 0_{(y < 0 \vee x \geq y)}; x < y_{(x < 0 \vee x < y)}; x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R = 3 \geq x \vee x \geq y \vee y \geq 0$

CDCL(T) : Example

$$\text{RESOLVE} \frac{R = 3 \geq x \vee x \geq y \vee y \geq 0 \quad y < 0_{(y < 0 \vee x \geq y)} \in M}{R := 3 \geq x \vee x \geq y}$$

Mode = *resolution*

$M = [y < 0_{(y < 0 \vee x \geq y)}; x < y_{(x < 0 \vee x < y)}; x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R = 3 \geq x \vee x \geq y$

CDCL(T) : Example

$$\text{RESOLVE} \frac{R = 3 \geq x \vee x \geq y \quad x < y_{(x < 0 \vee x < y)} \in M}{R := 3 \geq x}$$

Mode = resolution

$$M = [y < 0_{(y < 0 \vee x \geq y)}; x < y_{(x < 0 \vee x < y)}; x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$$

$$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$$

$$R = 3 \geq x \vee x \geq y$$

CDCL(T) : Example

$$\text{RESOLVE} \frac{R = 3 \geq x \vee x \geq y \quad x < y_{(x < 0 \vee x < y)} \in M}{R := 3 \geq x}$$

Mode = resolution

$M = [y < 0_{(y < 0 \vee x \geq y)}; x < y_{(x < 0 \vee x < y)}; x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R = 3 \geq x$

CDCL(T) : Example

$$\text{RESOLVE} \frac{R = 3 \geq x \quad 3 < x_{3 < x} \in M}{R := \perp}$$

Mode = resolution

$M = [y < 0_{(y < 0 \vee x \geq y)}; x < y_{(x < 0 \vee x < y)}; x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R = 3 \geq x$

$$\text{RESOLVE} \frac{R = 3 \geq x \quad 3 < x_{3 < x} \in M}{R := \perp}$$

Mode = resolution

$M = [y < 0_{(y < 0 \vee x \geq y)}; x < y_{(x < 0 \vee x < y)}; x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R = \perp$

CDCL(T) : Example

RESOLVE $\frac{R = \perp}{\text{return UNSAT}}$

Mode = resolution

$M = [y < 0_{(y < 0 \vee x \geq y)}; x < y_{(x < 0 \vee x < y)}; x \geq 0_{(3 \geq x \vee x \geq 0)}; 3 < x_{3 < x}]$

$F = \{3 < x, x < 0 \vee x < y, y < 0 \vee x \geq y\}$

$R = \perp$

Explanations

How to find efficiently $l_1, \dots, l_n \in M$ such that $l_1, \dots, l_n \models \perp$?

- ▶ In practice, we check for $M \models \perp$ and, if that's true, then we ask the theory solver to produce an **explanation**, that is, a set of literals $\{l_1, \dots, l_n\} \subseteq M$ such that $\{l_1, \dots, l_n\} \models \perp$
- ▶ There may be **several** explanations and some of them may contain **irrelevant** literals
- ▶ Decision procedures try to produce **minimal** explanations

Theory Propagation

- ▶ Similarly to rule **UNIT**, rule **T-PROPAGATE** is optional
- ▶ Contrary to rule **UNIT**, the implementation of rule **T-PROPAGATE** can be very costly

How to find efficiently l and $l_1, \dots, l_n \in M$ s.t $l_1, \dots, l_n \models l$?

- ▶ Theory solver are instrumented to find a literal l implied by M and to return an explanation of the **unsatisfiability** of $M \wedge \neg l$
- ▶ The explanation is also expected to be **minimal**
- ▶ In practice, decision procedures find **some** implied literals, not all as this can be very costly

Decision Procedures for SMT

Decision procedures found in articles or textbooks need usually to be adapted for being used in SMT solvers

- ▶ **Incrementally** : decision procedures are called successively on set of literals $M_0 \subset M_1 \subset \dots \subset M_k$

To gain for efficiency, we don't want to restart from scratch for each M_i but try to reuse work done for M_i when processing M_{i+1}

- ▶ **Backtracking** : operations for going back to a previous state of the decision procedure should be very efficient
- ▶ **Propagation** : find the good tradeoff between precision and performance
- ▶ **Explanations** : find an efficient generation mechanism that removes irrelevant literals (decidability issues)

Examples of decision procedures

The Free Theory of Equality with Uninterpreted Symbols

Axioms:

- ▶ Reflexivity $\forall x.x = x$
- ▶ Symmetry $\forall x, y.x = y \Rightarrow y = x$
- ▶ Transitivity $\forall x, y, z.x = y \wedge y = z \Rightarrow x = z$
- ▶ Congruence

$$\forall x_1, \dots, x_n, y_1, \dots, y_n.$$

$$x_1 = y_1 \wedge \dots \wedge x_n = y_n \Rightarrow f(x_1, \dots, x_n) = f(y_1, \dots, y_n)$$

Examples:

$$g(y, x) = y \wedge g(g(y, x), x) \neq y$$

$$f(f(f(a))) = a \wedge f(f(f(f(f(f(a)))))) = a \wedge f(a) \neq a$$

Congruence Closure

Let \mathcal{R} an **equivalence relation** on terms. The domain of \mathcal{R} , denoted by $\text{dom}(\mathcal{R})$, is the set of all terms and subterms of R

- ▶ **Congruence**

Two terms t and u are **congruent** by \mathcal{R} if they are respectively of the form $f(t_1, \dots, t_n)$ and $f(u_1, \dots, u_n)$ and $(t_i, u_i) \in \mathcal{R}$ for all i

\mathcal{R} is **closed by congruence** if for all terms $t, u \in \text{dom}(\mathcal{R})$ congruent par \mathcal{R} we have $(t, u) \in \mathcal{R}$

- ▶ **Congruence Closure**

The congruence closure of \mathcal{R} is the **smallest** relation containing \mathcal{R} and which is closed by **congruence**

Representation of Terms and Equality Relation

1. Terms are represented by **DAG** (directed acyclic graphs)

For instance, $f(f(a,b),b)$ is represented by the following graph

Representation of Terms and Equality Relation

1. Terms are represented by **DAG** (directed acyclic graphs)

For instance, $f(f(a,b),b)$ is represented by the following graph

2. \mathcal{R} is represented by dotted lines

For instance, $f(f(a,b),b) = a$ is represented by a dotted line between f and a

Representation of Terms and Equality Relation

1. Terms are represented by **DAG** (directed acyclic graphs)

For instance, $f(f(a,b),b)$ is represented by the following graph

2. \mathcal{R} is represented by dotted lines

For instance, $f(f(a,b),b) = a$ is represented by a dotted line between f and a

3. DAG associated with an equivalence relation are called **E-DAG** (equality DAG)

Naive Congruence Closure

The equivalent relation \mathcal{R} (the dotted lines) is implemented as a **union-find** data structure on the nodes of the DAG

find(n) returns the representative of the node n

union(n, m) merges the equivalence classes of n and m

Naive **congruence closure** algorithm:

For every nodes n and m such that $\text{find}(n) \neq \text{find}(m)$,

if n and m are labeled with the same symbol **and**

they have the same number of children **and**

$\text{find}(n_i) = \text{find}(m_i)$ for every children n_i and m_i of n and m

then, merge the classes of n and m by **union**(n, m)

Example

$g(g(g(a))) = a \wedge g(g(g(g(g(a)))) = a \wedge g(a) \neq a$ satisfiable?

Example

$g(g(g(a))) = a \wedge g(g(g(g(g(a)))) = a \wedge g(a) \neq a$ satisfiable?

Example

$g(g(g(a))) = a \wedge g(g(g(g(g(a)))) = a \wedge g(a) \neq a$ satisfiable?

Example

$g(g(g(a))) = a \wedge g(g(g(g(g(a)))) = a \wedge g(a) \neq a$ satisfiable?

Example

$g(g(g(a))) = a \wedge g(g(g(g(g(a)))) = a \wedge g(a) \neq a$ satisfiable?

Example

$g(g(g(a))) = a \wedge g(g(g(g(g(a)))) = a \wedge g(a) \neq a$ satisfiable?

Example

$g(g(g(a))) = a \wedge g(g(g(g(g(a)))) = a \wedge g(a) \neq a$ satisfiable?

Example

$g(g(g(a))) = a \wedge g(g(g(g(g(a)))) = a \wedge g(a) \neq a$ satisfiable?

Example

$g(g(g(a))) = a \wedge g(g(g(g(g(a)))) = a \wedge g(a) \neq a$ satisfiable?

Example

$g(g(g(a))) = a \wedge g(g(g(g(g(a)))) = a \wedge g(a) \neq a$ satisfiable?

$g(a) = a$ is implied by the E-DAG

Difference logic

Difference Logic (DL)

$$x - y \leq c \quad \text{where } x, y, c \in (\mathbb{Q} \text{ or } \mathbb{Z})$$

Strict inequalities

- ▶ in \mathbb{Z} , $x - y < c$ is replaced $x - y \leq c - 1$
- ▶ in \mathbb{Q} , $x - y < c$ is replaced $x - y \leq c - \delta$ where δ is a **symbolic** sufficiently small parameter

Equalities

- ▶ $x = y$ is the same as $x - y \leq c \wedge y - x \leq -c$

One variable constraints

- ▶ $x \leq c$ is replaced by $x - x_{zero} \leq c$, where x_{zero} is a fresh variable whose value must be 0 in any solution

DL : Graph Interpretation

Given a set of difference constraints M , we construct a weighted directed graph $\mathcal{G}_M(V, E)$ as follows :

- ▶ the set of vertices V contains the variables of the problem plus an **extra** variable s
- ▶ the set of weighted edges E contains an edge $y \xrightarrow{c} x$ for each constraint $x - y \leq c$, plus an edge $s \xrightarrow{0} x$ for each variable x of the problem

DL : Example

$$x_1 - x_2 \leq 0$$

$$x_1 - x_5 \leq -1$$

$$x_2 - x_5 \leq 1$$

$$x_3 - x_1 \leq 5$$

$$x_4 - x_1 \leq 4$$

$$x_4 - x_3 \leq -1$$

$$x_5 - x_3 \leq -3$$

$$x_5 - x_4 \leq -3$$

DL : Satisfiability and Models

A **negative cycle** in $\mathcal{G}_M(V, E)$ is a path

$$x_0 \xrightarrow{c_0} x_1 \xrightarrow{c_1} \dots \xrightarrow{c_{n-1}} x_n \xrightarrow{c_n} x_0$$

such that $c_0 + c_1 + \dots + c_{n-1} + c_n < 0$

Theorem

If $\mathcal{G}_M(V, E)$ has a **negative cycle** then M is unsatisfiable, otherwise a solution is

$$x_1 = \delta(s, x_1), \dots, x_n = \delta(s, x_n)$$

where $\delta(s, x_i)$ is the **shortest-path weight** from s to x_i

DL : Correctness

Proof.

Any negative-weight cycle $v_1 \xrightarrow{c_1} v_2 \xrightarrow{c_2} \dots \xrightarrow{c_{n-1}} v_n \xrightarrow{c_n} v_1$ corresponds to a set of difference constraints

$$v_2 - v_1 \leq c_1$$

$$v_3 - v_2 \leq c_2$$

...

$$v_1 - v_n \leq c_n$$

If we sum them all, we get $0 \leq c_1 + c_2 + \dots + c_n$ which is **impossible** since a negative cycle implies $c_1 + c_2 + \dots + c_n < 0$

Now, if $\mathcal{G}_M(V, E)$ has no negative cycle, for any edge $x_i \xrightarrow{c} x_j$ we have $\delta(s, x_j) \leq \delta(s, x_i) + c$, or equivalently $\delta(s, x_j) - \delta(s, x_i) \leq c$. Thus, letting $x_i = \delta(s, x_i)$ and $x_j = \delta(s, x_j)$ satisfies the constraints $x_j - x_i \leq c$

DL : Example (cont)

$$x_1 - x_2 \leq 0$$

$$x_1 - x_5 \leq -1$$

$$x_2 - x_5 \leq 1$$

$$x_3 - x_1 \leq 5$$

$$x_4 - x_1 \leq 4$$

$$x_4 - x_3 \leq -1$$

$$x_5 - x_3 \leq -3$$

$$x_5 - x_4 \leq -3$$

DL : Example (cont)

$$x_1 - x_2 \leq 0$$

$$x_1 - x_5 \leq -1$$

$$x_2 - x_5 \leq 1$$

$$x_3 - x_1 \leq 5$$

$$x_4 - x_1 \leq 4$$

$$x_4 - x_3 \leq -1$$

$$x_5 - x_3 \leq -3$$

$$x_5 - x_4 \leq -3$$

DL : Example (cont)

$$x_1 = -5$$

$$x_2 = -3$$

$$x_3 = 0$$

$$x_4 = -1$$

$$x_5 = -4$$

Negative Cycle Detection

Negative cycle can be detected with **shortest path** algorithms

Most algorithms are based on the technique of **relaxation**

- ▶ For each vertex x , we maintain an **upper bound** $d[x]$ on the weight of a shortest path from s to x
- ▶ **Relaxing** an edge $x \xrightarrow{c} y$ consists in testing whether we can improve the shortest path to y found so far by going through x
- ▶ Additionally, shortest paths are saved in an array π that gives the **predecessor** of each vertex

if $d[y] > d[x] + c$ **then**

$d[y] := d[x] + c$

$\pi[y] := x$

Bellman-Ford Algorithm

for each $x_i \in V$ **do** $d[x_i] := \infty$ **done**

$d[s] := 0$

for $i := 1$ **to** $|V| - 1$ **do**

for each $x_i \xrightarrow{c} x_j \in E$ **do**

if $d[x_j] > d[x_i] + c$ **then**

$d[x_j] := d[x_i] + c$

$\pi[x_j] := u$

done

done

for each $x_i \xrightarrow{c} x_j \in E$ **do**

if $d[x_j] > d[x_i] + c$ **then**

 return **Negative Cycle Detected**

Follow π to reconstruct the cycle

done

Bellman-Ford Algorithm : Correctness

Proof.

Suppose that $\mathcal{G}_M(V, E)$ contains a negative cycle $x_0 \xrightarrow{c_0} x_1 \xrightarrow{c_1} \dots \xrightarrow{c_{k-1}} x_k$ with $x_0 = x_k$. Assume Bellman-Ford does not find the cycle. Thus, $d[x_i] \leq d[x_{i-1}] + c_{i-1}$ for all $i = 1, 2, \dots, k$. Summing these inequalities, we get

$$\sum_{i=1}^k d[x_i] \leq \sum_{i=1}^k d[x_{i-1}] + \sum_{i=1}^k c_{i-1}$$

Bellman-Ford Algorithm : Correctness

Proof.

Suppose that $\mathcal{G}_M(V, E)$ contains a negative cycle
 $x_0 \xrightarrow{c_0} x_1 \xrightarrow{c_1} \dots \xrightarrow{c_{k-1}} x_k$ with $x_0 = x_k$. Assume Bellman-Ford
does not find the cycle. Thus, $d[x_i] \leq d[x_{i-1}] + c_{i-1}$ for all
 $i = 1, 2, \dots, k$. Summing these inequalities, we get

$$\sum_{i=1}^k d[x_i] - \sum_{i=1}^k d[x_{i-1}] \leq \sum_{i=1}^k c_{i-1}$$

Bellman-Ford Algorithm : Correctness

Proof.

Suppose that $\mathcal{G}_M(V, E)$ contains a negative cycle $x_0 \xrightarrow{c_0} x_1 \xrightarrow{c_1} \dots \xrightarrow{c_{k-1}} x_k$ with $x_0 = x_k$. Assume Bellman-Ford does not find the cycle. Thus, $d[x_i] \leq d[x_{i-1}] + c_{i-1}$ for all $i = 1, 2, \dots, k$. Summing these inequalities, we get

$$\sum_{i=1}^k d[x_i] - \sum_{i=1}^k d[x_{i-1}] \leq \sum_{i=1}^k c_{i-1}$$

but, since $x_0 = x_k$, we have

$$\sum_{i=1}^k d[x_i] = \sum_{i=1}^k d[x_{i-1}]$$

Bellman-Ford Algorithm : Correctness

Proof.

Suppose that $\mathcal{G}_M(V, E)$ contains a negative cycle
 $x_0 \xrightarrow{c_0} x_1 \xrightarrow{c_1} \dots \xrightarrow{c_{k-1}} x_k$ with $x_0 = x_k$. Assume Bellman-Ford
does not find the cycle. Thus, $d[x_i] \leq d[x_{i-1}] + c_{i-1}$ for all
 $i = 1, 2, \dots, k$. Summing these inequalities, we get

$$0 \leq \sum_{i=1}^k c_{i-1}$$

which is impossible since the cycle is **negative**

Bellman-Ford Algorithm (cont)

- ▶ Checking satisfiability can be performed in time $O(|V| \cdot |E|)$
- ▶ Inconsistency explanations are negative cycles (irredundant but not minimal explanations)
- ▶ Incremental and backtrackable extensions exist
